

Accelerate your transformation from non-SAP to SAP

Kyano® Crossway accelerates the data transformation of non-SAP systems to SAP with a reliable, repeatable, and robust software-based migration solution supported by configurable, template-based content.

Enterprises face the challenge of consolidating their fragmented ERP landscapes and complex legacy infrastructures onto SAP. The need for modernization is clear, but the path forward looks complex and time-intensive.

Any source Intelligent data discovery & selection

to Conversion & mapping

SAP target Data enrichment & posting

Kyano Crossway accelerates the end-to-end data transformation of non-SAP systems to SAP with a robust software-based approach that incorporates reusable templates designed for specific source systems.

Kyano Crossway's repeatable execution – built on decades of delivering complex migration projects – helps organizations reduce downtime, eliminate manual work, and achieve a scalable path to SAP without rebuilding everything from scratch.

Robust & reliable migration to SAP

One integrated toolchain for the end-to-end process lowers risk and speeds up execution, unlocking greater control over data extraction

Streamlined project timelines

Repeatable approach accelerates onboarding and time to value with pre-validated templates reusable across projects and systems

Business continuity & modernization

Extension of SNP's proven migration process for non-SAP to SAP migrations, providing structured and scalable modernization

Years ago, you'd run a transformation project once every five or ten years. Now, companies must be in a permanent state of readiness - to change fast, to innovate, to stay resilient. That's why a partner like SNP is critical to supporting our digital ecosystem. You understand what it takes, and you continue to deliver.
